Transfer for ink jet printers and plotters - apply with heat-iron

To print and personalize coloured fabrics.
For T-shirts, canvas, textile patches and other coloured fabrics.

Bypass print - plastic feel - various fabrics

For printing your own drawings with a common house-hold iron. To customize your coloured gadgets, T-shirts, shorts, mouse pads, calendars, rucksacks...

The print has to be made on the matte side of the transfer without "mirror effect". You can get your image from any PC and inkjet printer. You may even draw by hand your own design with pencils, pastels, water colours. Set the printer to a 300/400 dpi resolution - normal/high quality (max. 720 dpi). Work in a dry, warm place, (this product is sensitive to humidity). Let the print dry before transferring.

HOW TO TRANSFER ON COLOURED T.SHIRTS OR FABRICS WITH A HEAT-IRON.

Work on a strong and firm table covered with a soft smooth cloth; the heat-iron should be set to high temperature and pre-heated (about 185°C). Cut out the image and place the coloured side facing upwards. Place a heat resistant tissue paper on the drawing. The T-shirt has to be stretched out. Iron the transfer on the garment continuously without stopping in any point. The hottest part of the iron is under the handle while the point isn't warm enough to transfer the colour on the fabric. Carefully press the corners and the borders of the image which are the most important parts. Pressing time may vary depending on the size of the image. For A4 size (cm. 21 x29.7) not less than 2 minutes. If the image is smaller than the iron, 1 minute could be enough. Wait a few seconds and remove the tissue paper. Be sure to pre-heat the iron to maximum temperature before starting. This allows the colours to penetrate deep into the fabric.

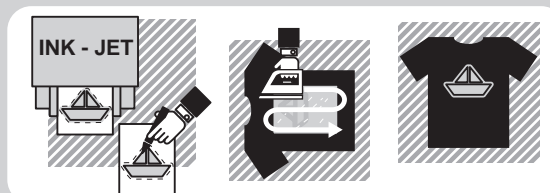

The T-shirt can be machine-washed at max. 40°C or hand-washed in cold or lukewarm water. We suggest to wash the garment inside-out. Iron on the reverse side or protect with a cloth. When you iron the garment the colours becomes brilliant.

Follow the same instructions when personalising jackets, shorts, mouse pads, calendars, rucksacks...

Available in boxes of 50 sheets in A4 size. Other settings are available on request.

N.B. These instructions are simply suggested, since they refer to tests performed in our laboratories. You should perform other tests on your own before any application. The producer will substitute any defective material, but is not responsible for any damage caused by improper use.
