Shock Line... personalization without limits!

FC SUPER2003+ , FC TOPCUT

Transfer papers for personalizing white or light colored cotton, natural and synthetic fabrics such as Lycra, satin, polyester. Suitable for t-shirts, polos, singlets, bags, pouches, caps, pillows, aprons, bibs,

FC SUPER2003+ is really unique for its very high quality graphical

FC TOPCUT is a single step, self weeding transfer paper. It transfers images with shadings up to 30%. Only the toner-colored areas are transferred.

## Heat transfer papers for colored fabrics

Transfer papers for personalizing dark or colored cotton, natural and synthetic fabrics such as Lycra, satin, polyester. Suitable for

FC BLANC is a cuttable, white background, single step transfer paper. Versatile and elastic, it ensures a perfect cut and a very soft screen print like feel.

FC TOPCOLOR (printable sheet + application tape sheet) is a self weeding transfer paper (No Cut). Ensures best results with CMYK patterns) included in the Shock Line color palette (purchased with the and metallic foils.

FCTOPDARKNEW (glue sheet + image sheet) is a self weeding Toner printers. For other printers testing is necessary.

## Heat transfer papers for for various light colored surfaces

FC FILM2

FC SOFT

FC FILM2 is excellent for tanned skin, synthetic leather, wood and cardboard. It releases a thin but resistent film which protects the print. It can be cut & weed.

FC SOFT is the ideal for natural leather and wood. It releases a very thin film which does not change the material's natural look. These can be processed subsequently.

They are suitable for jackets, skirts, trousers, shoes, bags, belts, shelves, cabinets, chairs, frames, boxes and ideal for cardboard

FC FILM2 can also be used on colored or dark surfaces if combined with FO PRIPELW primer

FC SOFT with FO PRIMER ensures a better grip on complicated light colored surfaces and is suitable for **surfaces with low heat resistance**, maximum 120°C. It works with temperatures as low as 70°C.

## **Heat transfer papers for** light colored stiff materials

FC POLARTGOLD FC POLARTNEW

Transfer papers for personalizing aluminum, Plexiglas, hard plastic, ceramic, glass and other metals.

FC POLARTGOLD is ideal for printers with very high fuser temperatures and for high temperature applications. FC POLARTNEW is suitable for other cases.

They are particularly useful for customizing objects such as **metal** plates, signs, souvenirs, sacred art objects, mirrors, vases, artistic repros, tiles, mugs and more.

> Very high printing quality and very good scratch resistence. The pleasant semi-glossy finish gives the object added value. These transfer papers release only the toner.

# Water slide decals for decoupage objects

FC DECAL (also covering) FC ME130BLU (also covering)

FC WALLDEC

FC SISDECBLUWT Water slide decals for personalizing light or dark colored materials.

FC DECAL has a very strong adhesive film which makes it the ideal decal for absorbant surfaces like wood, cardboard and stone. Excellent for ceramic, wax candels and plaster. Cuttable.

FC ME130BLU is a thin water slide decal for hard flat or curved objects (ex. glass or Plexiglas) and for objects that can't be oven heated such as candles. Ensures strong adhesion. Cuttable.

FC WALLDEC has a very thin and transparent film suitable for porous white or light colored surfaces such as walls, wood, cardboard, plaster and clay. Ideal for "do it yourself" and decoupage.

FC SISDECBLUWT (FC SOFT+FC ME130BLU) is a transparent system for personalizing flat smooth or curved colored objects that can't be oven heated such as candles. Ideal for White Toner or standard laser printers.

Examples: small "frescos", Christmas or ornamental candles, helmets, vases, models, decoupage objects and anything else that comes to mind.

Is a **printing system** that allows you to make **self weeding transfers** with all the colors of the rainbow on any type of white or colored fabric with any laser printer and only one screen.

New! Thanks to SELF SCREEN, the system for making transferable self weeding masks for screens, it is now possible to make your own screens in only 3 minutes and just 3 Euros. All you need is a CMYK printer and a heat press. More info at www.shockline.it.

### Custom print system Oroshock

, FC CLESD

AU CRT OROSL (gold foil)

• AU CRT ARGSL (silver foil)

Oroshock is ideal for personalizing graduation thesis folders. It's composed by a release transfer film (FC CLESD) for b&w laser printers and a silver or gold metal foil. It's a two step process: black toner transfer and metal foil lamination of the toner.

FC CART1 FC GLOSS

FC TRANPAD

FC CART1 is particularly useful for printing cardboard calender headers, FC GLOSS is the ideal jigsaw puzzle transfer and FC TRANPAD is especially made for mousepads with white textile surface.

Special transfer papers dedicated to these applications. Glossy, photographic finish, great colors and excellent value for money.

Shock Line also offers its customers a range of gadgets such as **puzzles** in A4 and A3 sizes, with boxes, with or without frames, classical or heart shaped, from 48 to 192 pieces and textile lined mousepads.

# Primer and protection

Combine with transfer papers for extra value

FO PRIPELW (also transparent)

FO PRO90

FO PRIMER

Primers and protections are useful for complicated surfaces

FO PRIPELW is a background primer that gives a stronger grip and better

covering on dark surfaces. FO PRIPEL (transparent) is suitable for light colored surfaces. Both are used with FC FILM2. FO PRO90 is a heat melt protection that ensures industrial washing

resistance. Use with FC BLANC.

FO PRIMER (transparent) improves grip on complicate light colored surfaces and on surfaces with low heat resistance, maximum 120°C. It works with temperatures as low as 70°C. Use with FC SOFT.
